

## *Trade Topics – September 2003*

Mat vanHeerden from Technipro informs me they have added the Micro Peak peak flow meter, standard range 60 - 900 L/Min, to their product range.

Micro Peak allows the health carer to individually "Zone" the device according to user target zone, using three colours to guide the user in the correct use of the peak flow meter. A file announcement is attached for further information. These can be obtained from Technipro quoting re-order No: MPE 7200.

Mat will be attending the Cortex Asia-Pacific annual meeting in Ho Chi Minh City from 18 - 20 Sep. This is an annual training and sales meeting for all Cortex distributors in Andrew Pearce's region. We will be focussing on MetaSoft 2, and the new software options, Zone Trainer, Nutritional Assessment and Spirometry. The new CardioLyzer Ultra will also be covered.
